

Engineer Turned Programmer
Billerica MA

Job Description

One of the greatest successes we can have at Walden is helping small scale producers committed to doing things right achieve operations that are sustainable *and* profitable. This can be a challenge in an industry where technological innovations only support high volume producers. We're looking for a well rounded developer who loves working on physical problems and is ready to grapple with developing robust low cost solutions. In this role you will design, implement and support software tools to help our internal teams and external partners solve challenges from inventory tracking to line automation. This role is based in our office warehouse in Billerica, MA.

Responsibilities

- Work with our operations R+D team under the supervision of Walden's Lead Systems Engineer. Collaborate with a team of web developers to integrate solutions with existing infrastructure.
- Work with project stakeholders to identify requirements, scope projects, and manage a timeline
- Design and implement lightweight software tools that complement the workflows of our internal teams and external vendors
- Provide remote support for partner vendors and processors
- Integrate late stage R+D projects with our existing infrastructure

Requirements

- Interested in working in a collaborative environment with technical and nontechnical contributors
- Willing to step outside of normal duties to help our team provide the best possible experience for members and partners
- Comfortable working with physical data from sensors and mitigating sources of error
- Comfortable working with off-the-shelf hardware to build low cost and functional tools
- 1-3 years experience deploying and supporting production level code
- Willing and able to travel up to 10% of the time to support off-site partners

Interested candidates should send resume and cover letter to jobs@waldenlocalmeat.com
